BLM Regent Handles fit perfectly with the luxurious ambience of Carbis Bay Hotel

David Salisbury, manufacturer of top of the range hardwood glazed extensions, had the pleasure of completing the design and installation of a bespoke, premium quality orangery at the award-winning Carbis Bay Hotel & Estate, the luxury resort near St Ives in

Cornwall which was chosen to host this year's G7 Summit.

The existing conservatory, offering panoramic ocean views, needed replacing to bring it up to the superior specification of the rest of

the estate. Alongside some much-needed aesthetic enhancements, the primary requirement of the new build was to create a more comfortable indoor environment; the existing uPVC extension was plagued with temperature issues consistent with extensions of a certain age.

As well as being a high-profile project, a tight turnaround was needed to get the estate ready for the G7 Summit. With modern glazing technologies and joinery techniques, bespoke wooden orangeries are designed for year-round enjoyment. Having been popular in residential settings for years, they are becoming increasingly prevalent in commercial applications, not least in the luxury hotel sector.

For this project, it was important to retain as much glazing content as possible. The previous conservatory provided diners with a wonderful panorama of the Atlantic Ocean and ensuring these views remained was essential. An orangery, with its perimeter flat roof and feature roof lanterns, was chosen to replace the previous conservatory, with its fully glazed roof. This more flexible type of extension better allows for all the features required for modern living to be incorporated, whilst still maximising on the views.

To complement the orangery, Coastal's Regent Door Handle and Regent Window Handle were specified from their BLU Range of 316 Marine Grade Stainless Steel Hardware. The classic styling of the BLU Regent Handles fitted perfectly with the luxurious ambience of the hotel. And with The Carbis Bay Estate situated right on the coast, fitting hardware made from 316 Marine Grade Stainless Steel to the

orangery was an absolute must. Salt air is extremely corrosive and harmful to hardware and studies have shown 316 Marine Grade Stainless Steel to be the best metal to withstand this corrosion. The Regent Door and Window Handles ticked that box as well, being made from solid 316 Stainless Steel they are well able to withstand the corrosive salt air.

David Salisbury completed the new orangery on time and on budget and ready to welcome G7 summit attendees, which took place from 11-13 June, 2021. David Salisbury has been designing, manufacturing, and installing top of the range hardwood conservatories, garden rooms and orangeries for over 35 years.

Based in Somerset, the company caters to both commercial and residential projects, demonstrating unrivalled technical innovation as well as a commitment to excellence in customer service.

Products in this case study

REG090 - Regent Lever Door Handle in Satin Stainless Steel

REG020 - Regent Window Espagnolette Handle in Satin Stainless Steel
