

DOOR HARDWARE

LOCK BACKSET INFORMATION

What is the backset on the lock?

Backsets on multipoint door locks are determined by the distance from the faceplate to the centre line of the spindle or Euro cylinder, then plus 18mm for the overall depth of the lock case. This is shown on the drawing on the right - 45mm being the backset.

Backsets on door locks are typically available in 35mm, 45mm, 55mm dependant on type of lock being used. Not all multipoint door locks are available with the variations of backsets.
