

An optional restrictor will allow for emergency exit when required, whilst restricting window opening for day-to-day use, and for the protection of the young or elderly. Building regulations require that restrictors should be simple to release by manipulation by an adult who hasn't had prior instruction.

The EBX restrictor is integral to the hardware and can be easily disengaged to allow for escape in the event of an emergency, and is available for use with the 800mm, 1000mm, and 1140mm EBX espagnolette bolts.

Handed from the inside, i.e. a casement hung on the right viewed from inside is a left hand restrictor.
